

A lot of the uncertain events seem to involve the 'government' and the 'SPLAIO'. These words appear very often in the uncertain set. This could suggest several things such as that actual clashes between the two groups are difficult to verify. The common words in the records involving ambushes are 'killed', 'gunmen' and 'two'. This again could mean a multitude of things such as that ambushes involving a small number of gunmen occur frequently. Interestingly this set does not include 'reportedly' so it could be inferred that these have a greater degree of certainty. These suggestions are just conjecture as the frequency of these words could have various interpretations.
